

Logistics vehicles – Eurocargo Strength to tackle all missions

Eurocargo: the most suitable truck for every application - thanks to sound engineering, great manoeuvrability and a range that is unparalleled. With the Eurocargo, Iveco offers customers and bodybuilders a custom made vehicle for any transport requirement in the middleweight sector. The secret of the Eurocargo's success lies in its versatility:

- It is easy to drive, even in city centres thanks to a compact cab, an excellent steering angle (52 degrees) and a tight turning circle (starting from just over 11 m between kerbs);
- At the same time it offers excellent performance on long trips or on particularly difficult missions (up to 300 HP and 1,050 Nm of torque).

The Eurocargo is also a reference point in its category for its chassis. The structure (strong high tensile longitudinal steel beams) is completely flat and free from obstructions and allows bodylengths from 4,135 to 10,550 mm. This enables the Eurocargo to be easily adapted for any type of mission: from urban delivery to construction site work, from goods transport to municipal services. The Eurocargo is a vehicle which was born to be profitable, reliable and long-lasting.

Iveco is one of the premier manufacturers of trucks in Europe, offering an outstanding product range designed to meet the full spectrum of operational roles demanded by the humanitarian aid user. With more than 70 years of experience of designing and manufacturing logistic vehicles, Iveco has an extraordinary depth and breadth of engineering expertise which is continuously refreshed and updated through feedback from operations and from the marketplace. The result is one of the most technically advanced, reliable and maintainable product ranges in the world.

Flexibility of employment and reliable logistic back-up are essential to support the full range of operations undertaken by our customers. To meet these demands, our trucks are highly adaptable and possess outstanding strategic and tactical mobility.

Supported by our world class parts distribution system, once our trucks are in theatre, we ensure that they can be sustained there. This ensures they play their part in delivering the maximum capability on the ground in the shortest possible time.

With a wide range of our vehicles operating in countries worldwide, we have a deep understanding of the effects of hostile climates and terrain on our vehicles. This enables us to engineer them to meet the most hostile operating conditions, meeting the most stringent requirements for operability and functionality in a broad spectrum of climatic conditions.

The backbone of every Iveco Truck is a robust parallel frame designed to resist bending, but remain elastic to torsional stress. The frame is manufactured from high-quality, finegrained steel. In all areas of vehicle design, Iveco exploits the latest technical innovations to ensure that the performance of its vehicles is maximised.

With more than 4600 service points in the 5 continents, Iveco has true global coverage which, combined with an appreciation of particular local concerns, enables the company to provide assistance where and when it is needed and to respond to major situations quickly and effectively. Equipped with state-of-the-art diagnostic and communications technology, each service point is able to identify the fault and get the vehicle back on duty, without delay. All Iveco vehicles profits from this strong service network, easy-to-repair technology, and prompt spare-part availability in every corner of the world.
